Five-Step Framework for Risk-Based Due Diligence in the Mineral Supply Chain

At **RAW MINERAL RESOURCES COMPANY LTD**, we understand the importance of integrating and implementing the OECD Due Diligence Guidance (DDG) to ensure responsible mineral sourcing practices. To facilitate this process, we have developed a user-friendly document outlining a five-step framework for risk-based due diligence in our mineral supply chain. This framework aims to guide our management staff in effectively implementing due diligence processes and promoting responsible mineral sourcing practices.

Step 1: Establish Strong Company Management Systems

- **Policy Adoption:** We will adopt and clearly communicate a company policy for the supply chain of minerals originating from conflict-affected and high-risk areas. This policy will incorporate the standards against which due diligence is to be conducted, consistent with the guidelines provided in the DDG.
- **Internal Management Structure:** We will structure our internal management to support supply chain due diligence, ensuring clear roles and responsibilities.
- **System of Controls and Transparency:** We will establish a system of controls and transparency over the mineral supply chain, including a chain of custody or traceability system.
- **Supplier Engagement:** We will incorporate our supply chain policy into contracts and agreements with suppliers, and assist them in building capacities to improve due diligence performance.
- **Grievance Mechanism:** We will establish a company-level grievance mechanism as an early-warning risk-awareness system.

Step 2: Identify and Assess Risks in the Supply Chain

- **Risk Identification:** We will identify risks in our supply chain as recommended in the DDG supplements.
- **Risk Assessment:** We will assess risks of adverse impacts in light of the standards of our supply chain policy and the due diligence recommendations provided in the DDG.

Step 3: Design and Implement a Strategy to respond to Identified Risks

- **Reporting and Review:** We will report findings of the supply chain risk assessment to designated senior management and devise a risk management plan.
- **Risk Management Plan:** We will devise a strategy for risk management, which may involve continuing trade, temporarily suspending trade, or disengaging with a supplier based on the feasibility of risk mitigation.
- **Implementation and Monitoring:** We will implement the risk management plan, monitor and track performance of risk mitigation efforts, and undertake additional assessments as needed.

Step 4: Carry out Independent Third-Party Audit of Supply Chain Due Diligence

- **Audit Process:** We will have our due diligence practices audited by independent third parties at identified points in the supply chain, as indicated in the DDG supplements.
- **Verification:** Audits may be verified by an independent institutionalized mechanism to ensure credibility and transparency such as ICGLR/RCM third Party Auditor and ITSCI 3rd Party Auditor.

Step 5: Report annually on Supply Chain Due Diligence

- **Public Reporting:** We will publicly report annually on our supply chain due diligence policies and practices, potentially expanding the scope of our sustainability or corporate social responsibility reports to cover additional information on mineral supply chain due diligence.

By following this five-step framework, **RAW MINERAL RESOURCES COMPANY LTD** aims to integrate and implement the OECD DDG effectively, ensuring responsible mineral sourcing practices and contributing to sustainable development in the regions where we operate.
